

Issue 01 — Missing Causes Content

Problem : The Causes page currently does not display any causes, initiatives, or areas of work. Instead, the main content area shows a **“No Results”** message, leaving a large portion of the page empty. This makes it difficult for visitors to understand the foundation’s focus areas and the social causes it works toward.

Solution : Replace the empty “No Results” area with a structured **“Our Key Causes”** section. The section can showcase the foundation’s key areas of work using visually consistent cards containing relevant imagery, cause titles, brief descriptions, and **“Learn More”** buttons. This provides visitors with clear information about the foundation’s initiatives and creates a more engaging browsing experience.

Issue 02 — Oversized Page Banners

Problem : Most inner pages of the website use an oversized banner section containing the page title and breadcrumb. The banner occupies a significant amount of the initial viewport, while providing very limited information. As a result, users have to scroll considerably before reaching the actual page content, creating unnecessary vertical space and reducing content visibility above the fold.

Solution : Reduce the height of the inner-page banner and use a more compact page-header design. The page title and breadcrumb can remain clearly visible while taking up substantially less vertical space. This would allow the main content of pages such as **Contact, Events, and Blog** to appear much earlier, reducing unnecessary scrolling and improving content accessibility.

Issue 03 — Donation Button Visibility

Problem : The website does not provide a clearly visible donation option across all pages. On the homepage, the **“Donate Us”** option is placed within the content section and does not immediately appear as a clickable button. Other pages do not provide a direct donation option, which can make it difficult for visitors to access the donation page quickly.

Solution : Add a prominent **“Donate Now”** button to the top-right of the navigation bar and keep it visible across all pages. Using a clear button style and consistent placement will make the donation action immediately recognizable and allow users to access the donation page directly from anywhere on the website.

Issue 04 — Incorrect Social Media Links

Problem : The social media icons in both the **top navigation bar and footer** are connected to incorrect or generic URLs. Except for Instagram, the current links do not direct users to the foundation's relevant social profiles or contact address, which can lead to broken navigation and a poor user experience.

Current Links :

Instagram icon : <https://www.instagram.com/inamigos/> correct

Facebook icon : <https://www.facebook.com/inamigos.inamigos> wrong link

Twitter icon : <https://twitter.com/> wrong link

Pinterest icon : <https://pinterest.com/> wrong link

Google icon : <https://google.com/> wrong link .

Solution : Update each social icon with the foundation's correct destination and maintain the same links consistently in both the navigation bar and footer:

- **Instagram:** [instagram.com/inamigos/](https://www.instagram.com/inamigos/)
- **Facebook:** [facebook.com/InAmigos/](https://www.facebook.com/InAmigos/)
- **X (Twitter):** x.com/InamigosF
- **Pinterest:** InAmigos Foundation search page
- **Google/Email:** support@inamigosfoundation.org.in
